

ADVANCE YOUR CAREER AND BECOME THE TEAM COACH YOUR TEAM NEEDS!

A structured, evidence-based process + a team coach = better teams and better care.

Improvement and change starts with you. Taking a small step forward gets you on your way to achieving your goals and improving your teams' wellbeing and the experience of your patients.

We have been focusing on microsystems - the smallest replicable unit within a system - for 20 years. We spend our time: researching, testing, teaching and coaching ways to make improvement easier and more effective.

In the Team Coaching Program (TCP), the applied theory of team coaching comes to life with the coach learning and practicing helping individual multidisciplinary team members successfully work together to achieve their improvement goals and become a "high-performing" multidisciplinary team that provides and improves care and services for those we serve.

TCP is ideal for coaches of teams, improvement team leaders or facilitators, leaders/managers at all levels, health professional educators, patients, families, and quality improvement staff.

Faculty:

- Marjorie M. Godfrey, PhD, MS, BSN, FAAN - [Read bio](#)
- Ian McIntosh - [Read bio](#)
- Caroline Eadson - [Read bio](#)
